Toad for Oracle

Modernize your Oracle database operations to enable business agility

[Download Free Trial](#)[Buy ▾](#)

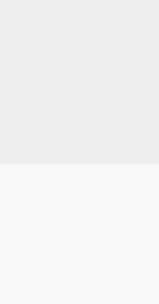

You're under pressure to take on more database responsibilities and work faster than ever before. This, combined with declining resources, puts your critical databases and cloud native applications at risk. But what if you could use a single toolset to speed Oracle SQL development and database administration while improving performance?

With Toad® for Oracle, you'll reduce costs and risks by easily ensuring the health and performance of your Oracle Cloud Platform and on-premises databases. Toad is the only developer tool of its kind that will simplify your workflow, help reduce code defects and improve code quality and performance while supporting team collaboration. On the operations side, you can automate administration tasks and proactively manage your databases while embracing performance optimization and risk mitigation. You can also use Toad for Oracle - Sensitive Data Protection to define, search for and protect sensitive data across all your Oracle databases quickly and easily.

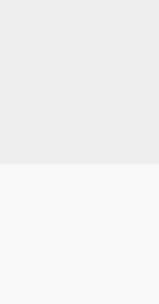

CI/CD-ready development

Promote DevOps processes and reduce work with continuous integration and continuous deployment.

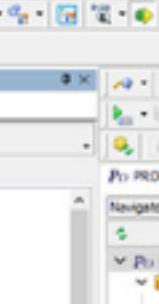

Reduce technical debt

Ensure functional accuracy and coding best practices to minimize code defects.

Automated performance testing

Ensure production scalability with automated workload replay testing.

Simplified SQL Optimization

Simplify and automate SQL optimization for developers; advanced SQL and index optimization for DBAs.

Risk mitigation

Accelerate application delivery, while minimizing risks associated with database changes.

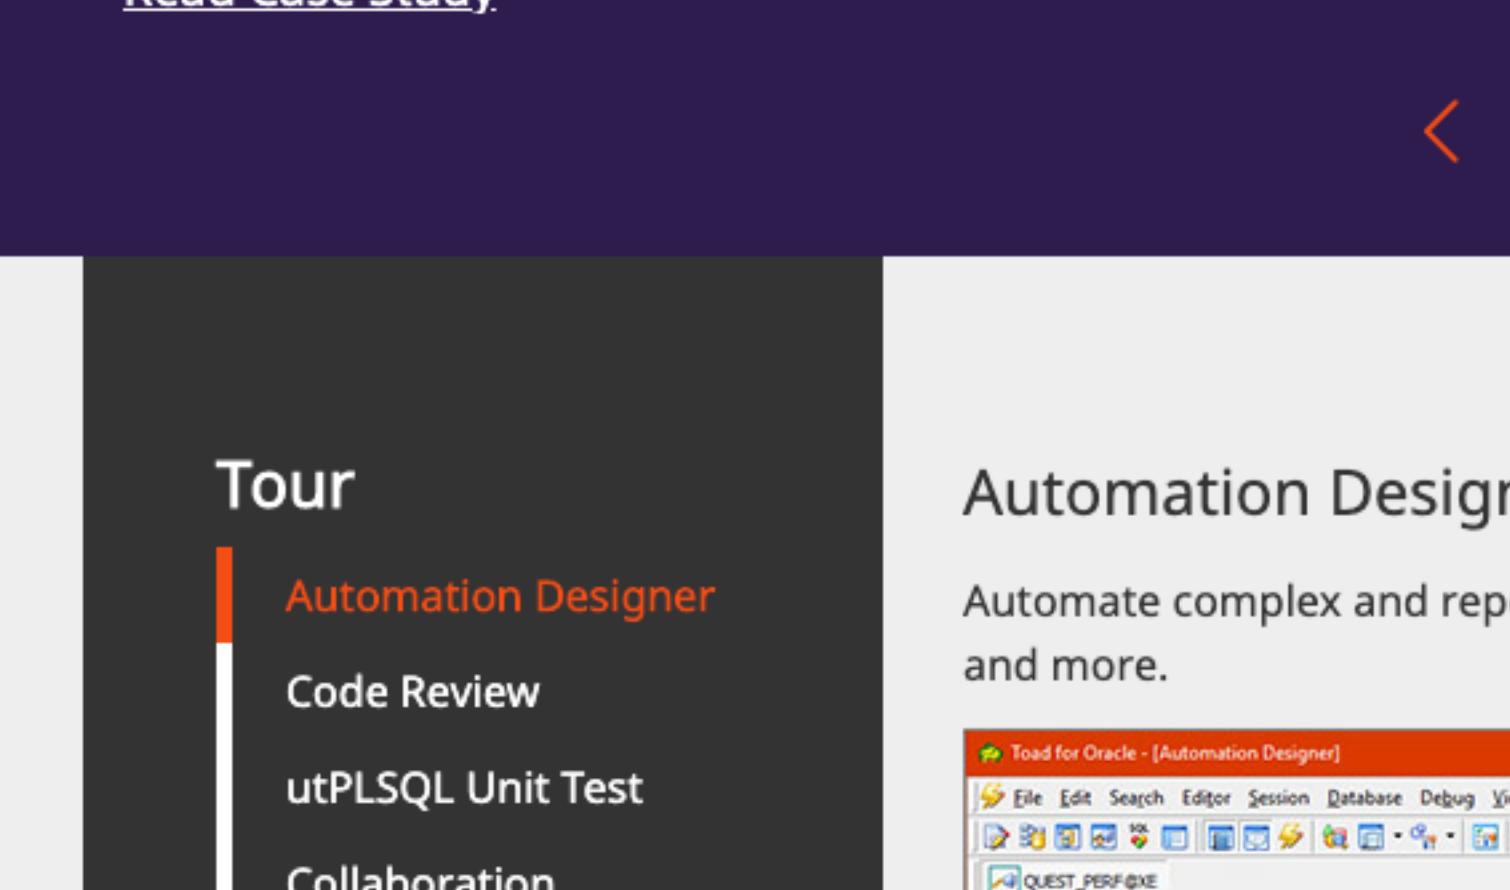

Database performance diagnostics

Quickly pinpoint and resolve database performance inefficiencies.

DevOps-ready development

[Team Coding](#) [PL/SQL Unit Testing](#) [Code Review](#) [SQL Optimization](#)

Team Coding

Integrates with your preferred source control system and provides collaborative access to schema objects. This allows Team Coding to reconcile changes with the corresponding files in source control, thus simplifying and streamlining the developer experience.

Product feature add-ons

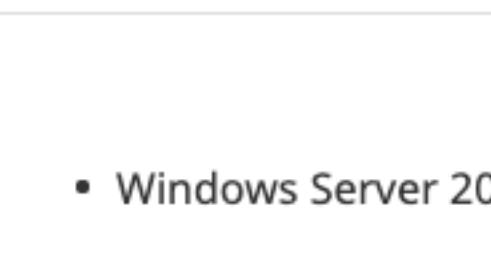

Automation
Reduce the risk of manual errors by automating complex and repetitive tasks like schema compare, script execution, administration, reporting and more.

PL/SQL code profiling
Easily determine why your code is executing slowly by visually exposing performance bottlenecks.

Team collaboration
Share standards, best practices, code, scripts, artifacts and more with your team or across the development organization.

Data modeling
Define the most efficient data structures before building your schemas and reverse engineer existing data structures.

Database health and security
Assess database health quickly by validating performance, configuration and security vulnerabilities through health check reporting.

Data privacy and auditing
Find and protect sensitive data and then apply Oracle's Data Redaction, Data Encryption and audit policies to secure and track data access.

“We have SQL Developer from Oracle, which is free, but our people prefer to use Toad. A lot of times, SQL Developer didn't provide enough functionality.”

Sue Canner Senior Operating Systems Programmer and DBA Manager, Miami-Dade County

Database Management Solutions

Software tools that simplify complexity, reduce cost and risk, and drive performance

[Watch Webcast](#)[Read Case Study](#)[Read White Paper](#)

Today's database technology is becoming increasingly complex, and supports previously unthinkable data volumes – all driven by the demands of today's always-on economy. This drives most organizations to spend up to 65% of their time just keeping the lights on, leaving very little time to deliver innovations that move the business forward.

Digital transformation initiatives such as cloud migration, DevOps, open-source database adoption and data privacy require commitment and time from IT at a time when they are already under huge pressure to maintain service levels.

It's time for a new approach. Spend less time managing your data environment, and more time building a data-driven business. As the top-ranked ISV for database management software tools in the world, we help you simplify this complex technology in order to manage, monitor and move your data across a wide variety of on-premises and cloud-based systems. Trust the database management software solutions used by millions of data professionals worldwide.

Capabilities

Discover how our database management software tools can automate routine tasks, provide high-quality data, standardize database performance monitoring, drive greater data availability and make you more agile.

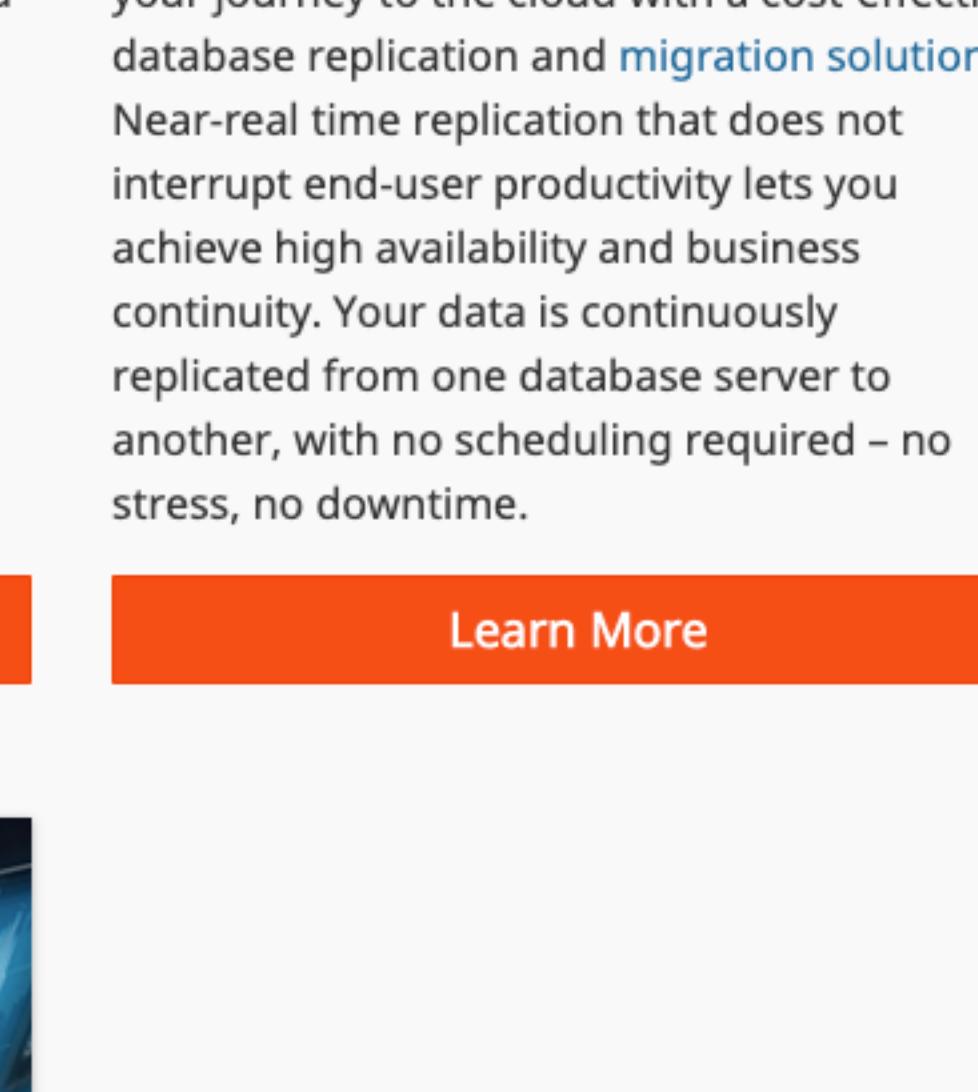

Database development

Get the power to respond rapidly to change. Our [database development](#) solutions enable you to implement consistent, repeatable processes to keep pace and become more agile. Set your team up for success as you blaze through development cycles, and minimize the risks associated with bugs, performance issues, coding standards, dispersed teams and more.

[Learn More](#)

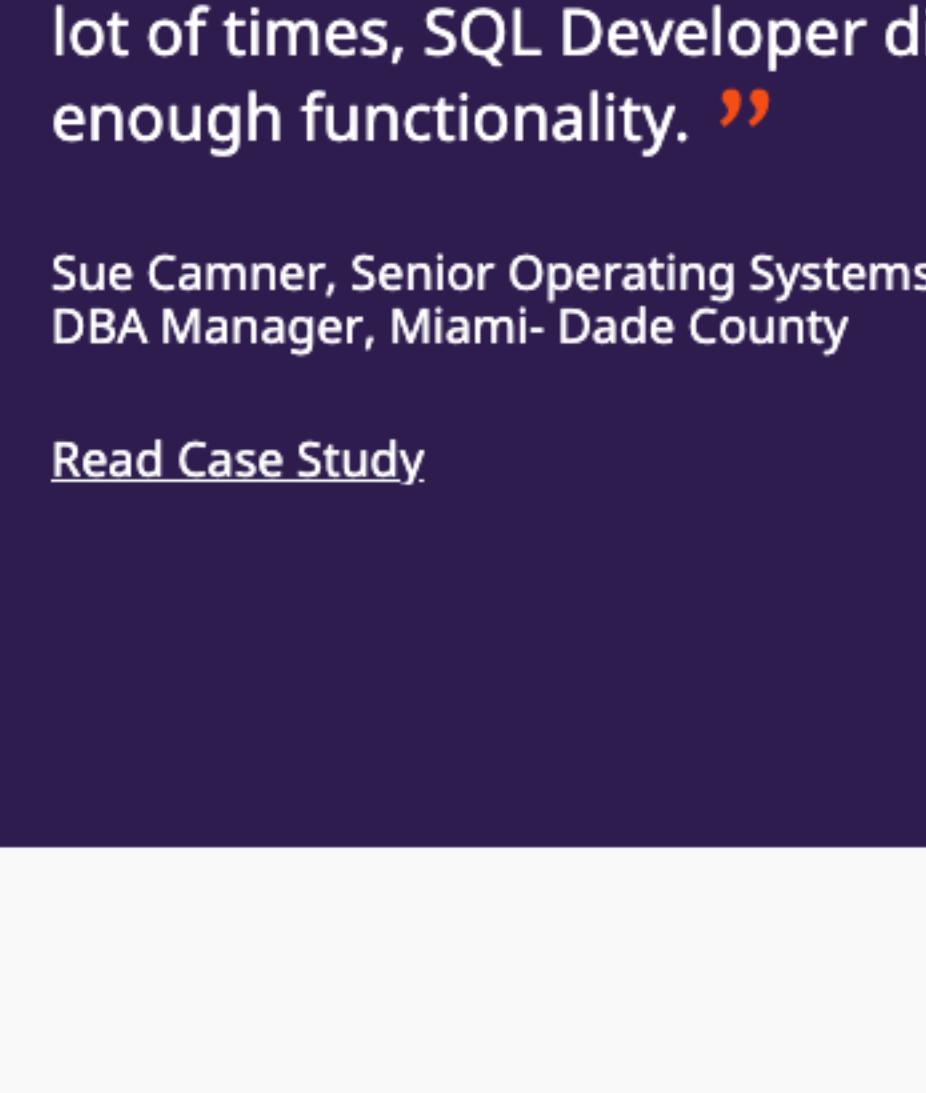

Database performance monitoring

Consolidate and standardize [database performance monitoring](#) across diverse, multi-platform environments, including SQL Server, Oracle, SAP, DB2, MongoDB, Cassandra and others – even when using native or third-party tools. View a complete picture of your environment so you can collaborate among teams to find and fix performance issues before they put your database at risk. Get valuable insight into all areas around database resources, workload analytics and change tracking whether on-premises or in the cloud.

[Learn More](#)

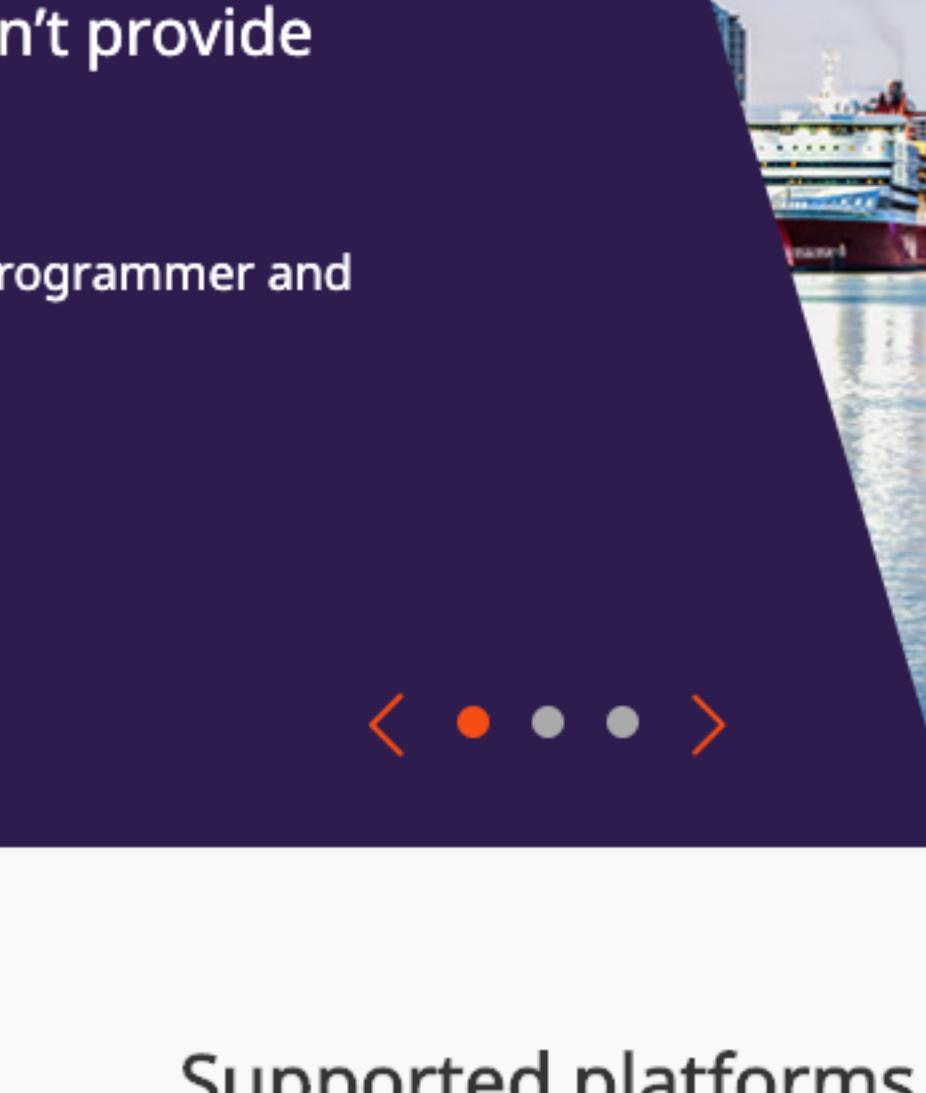

Database DevOps

Speed up database change management by giving your database developers the same [DevOps](#) and agile advantages that your application developers have. Our tools are designed to help Oracle, SQL Server, PostgreSQL and MySQL database developers overcome the biggest bottlenecks to writing, testing and releasing database changes at the pace today's business demand. Automate database code testing, analysis and validation from within your existing continuous integration and continuous delivery tools.

[Learn More](#)

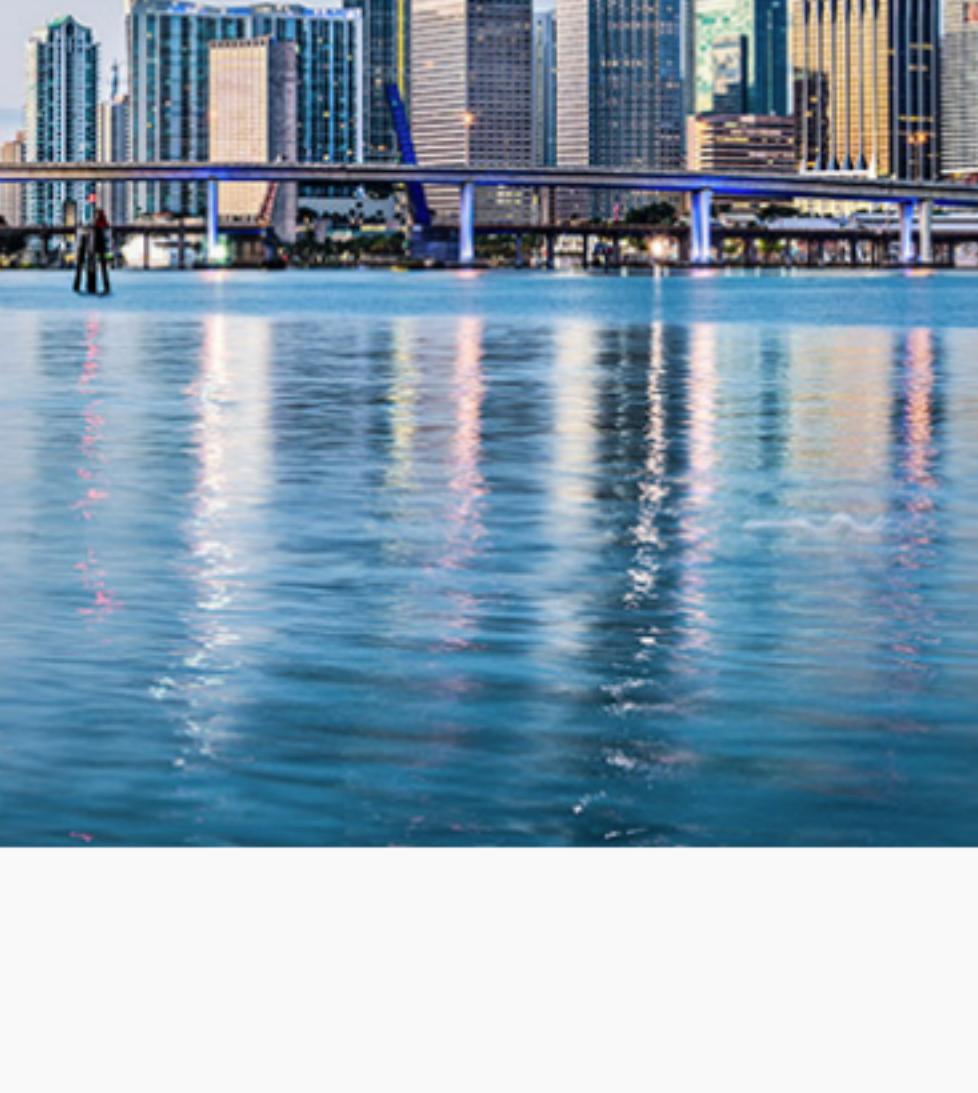

Database administration

Get ahead of the curve. Resolve problems before they impact your environment, and streamline routine [database administration](#) tasks, so you can focus on more meaningful endeavors. From administration to maintenance, performance monitoring, sensitive data protection, automation and collaboration, our solutions lead the way for today's highly effective [database administrator](#).

[Learn More](#)

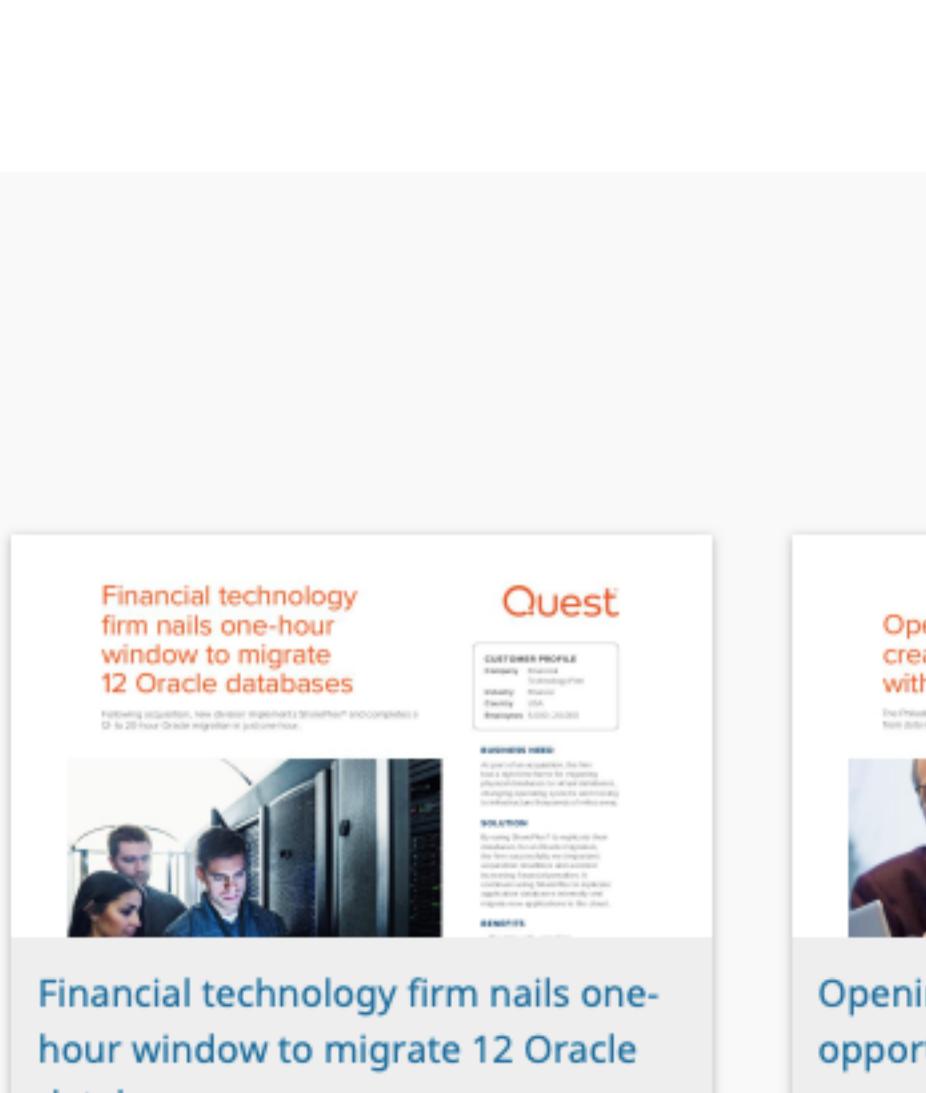

Sensitive data protection for GDPR compliance

Be ready to meet GDPR requirements and other data privacy regulations. Easily find and protect personal and sensitive data across all your Oracle and SQL Server databases with our [sensitive data protection](#) software.

[Learn More](#)

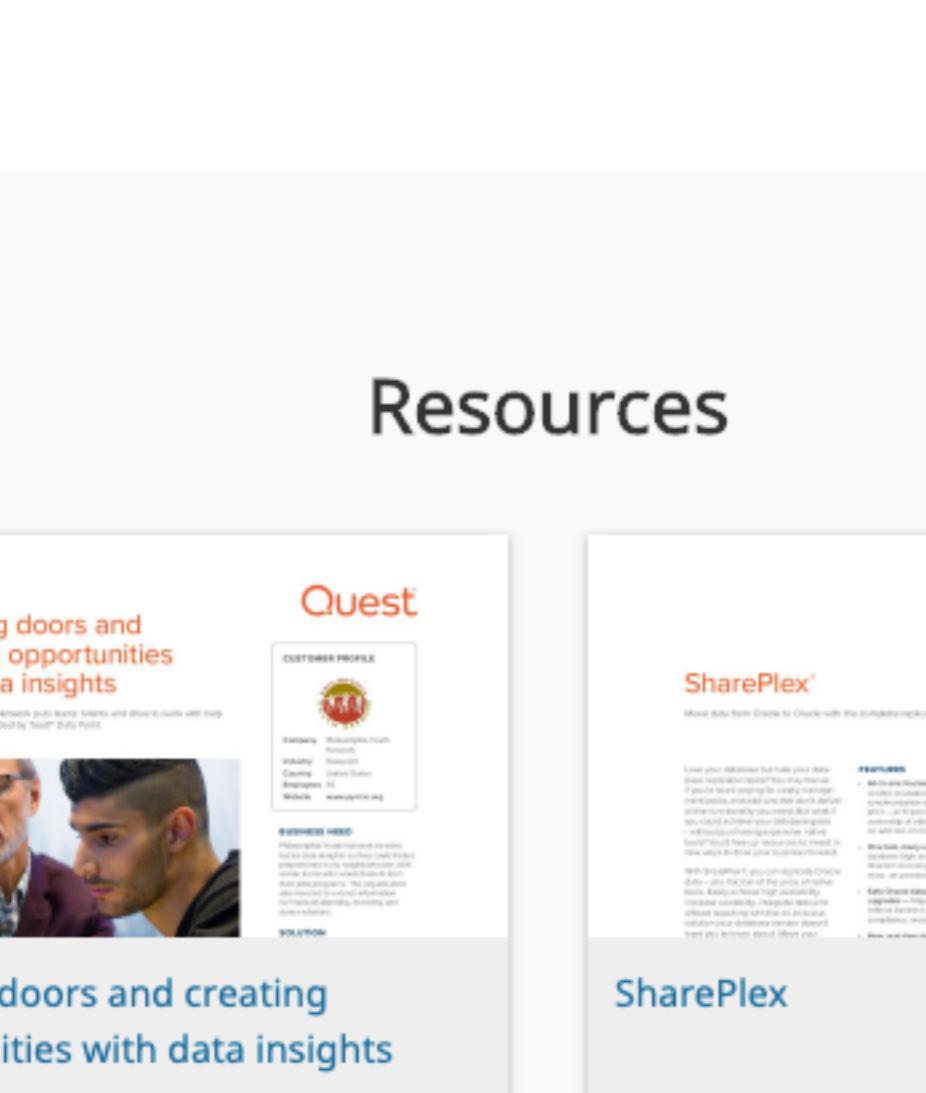

Cloud migration

Relax and become one with the cloud. Simplify your journey to the cloud with a cost-effective database replication and [migration solution](#). Near-real time replication that does not interrupt end-user productivity lets you achieve high availability and business continuity. Your data is continuously replicated from one database server to another, with no scheduling required – no stress, no downtime.

[Learn More](#)

Data preparation

Ensure your business community receives accurate, high-quality data quickly – regardless of the data source. Our [data preparation](#) solutions offer up to 50% time savings in data preparation tasks with secure, governed workflows. Provide data to your business users in real time, every time with desktop-based, self-service solutions. Enjoy a closer-to-business collaboration experience.

[Learn More](#)

Database replication

Drive greater data availability through industry-leading [database replication](#). Our solutions help you replicate data to where you need it most – whether it's replicating a production database for high availability or integrating data to other databases, whether on-premises or in the cloud. Count on high reliability with ZeroIMPACT to your systems.

Deduplication: The Hidden Truth and What it May Cost You

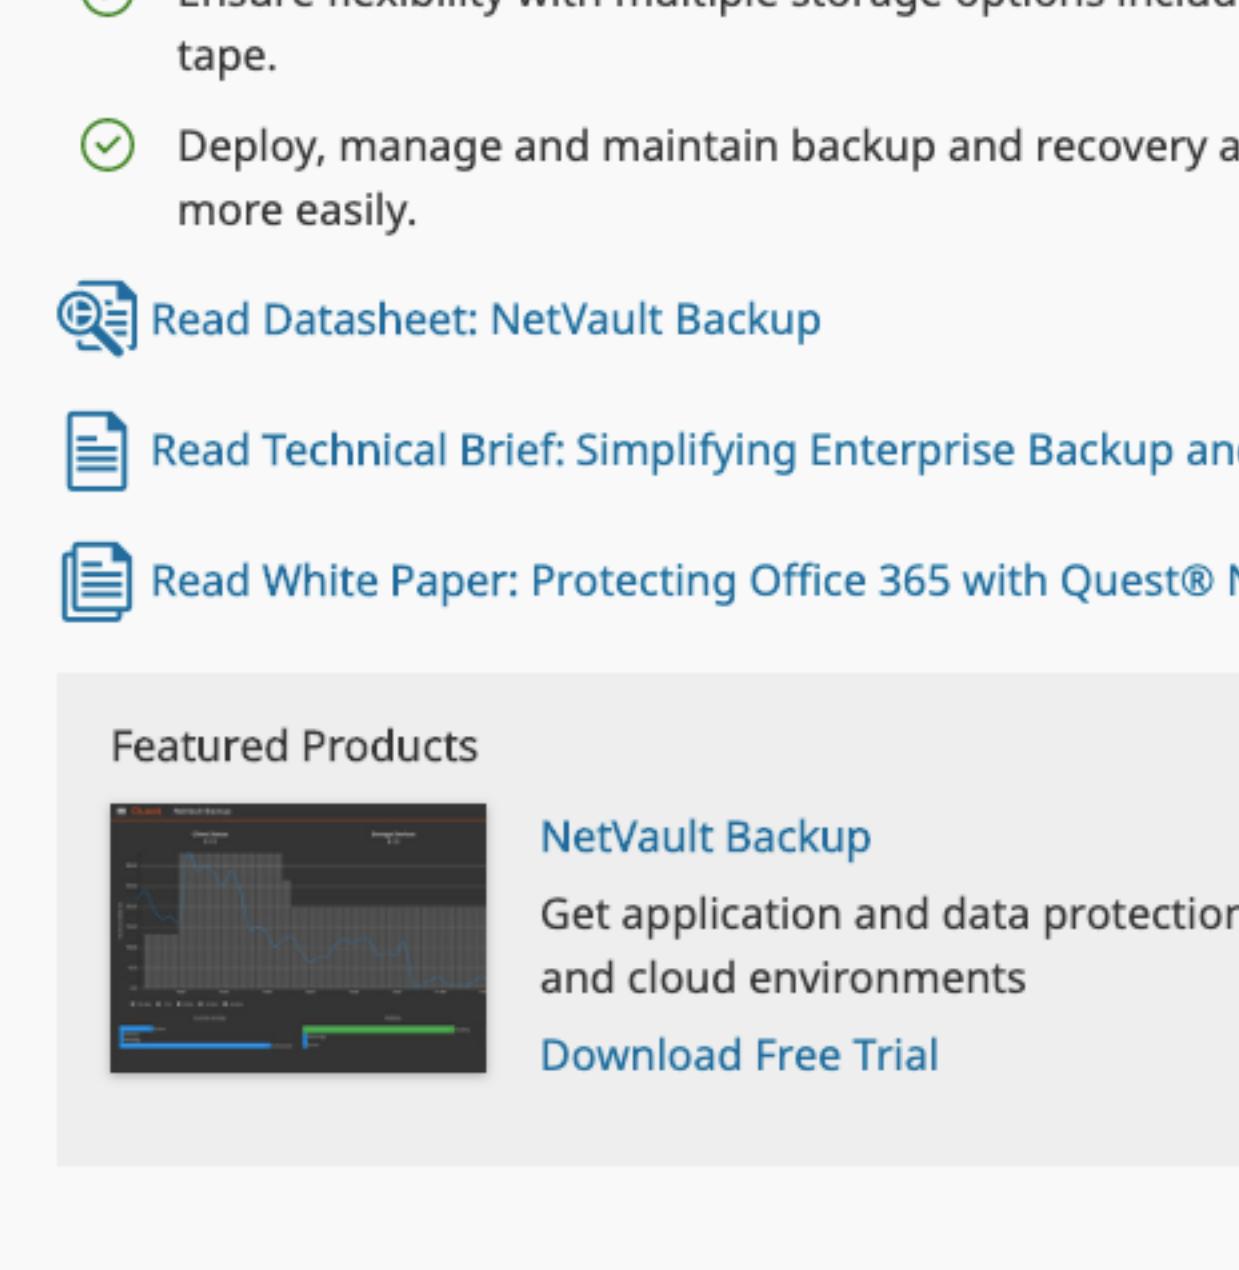

[Read Technical Brief](#)

Our solutions deliver the fast backup and recovery you need to keep pace with your business. Just ask our customers. The majority reported significant time-savings compared to their previous solutions with 20% seeing as much as a 10X performance increase with us. Our backup and recovery solutions are designed for fast-growing organizations like yours as you modernize your data protection. We enable you to:

- Protect anything – systems, apps and data – whether it's physical, virtual and or in the cloud.
- Recover your environment in about 15 minutes with zero impact on users.
- Accelerate backup for virtual environments and scale out to thousands of VMs.
- Slash storage requirements and costs with cloud-connected deduplication and replication.
- Replicate backups to remote sites and multiple clouds for true disaster recovery.
- Leverage tape and VTLs for true "air-gap" data protection against ransomware and other malware.

Capabilities

Reduce risk of system downtime and data loss that impacts your prospects, customers, and employees as well as your company reputation. Quest backup and recovery solutions protect your systems, applications and data in physical and virtual environments, wherever they reside – in the data center, remote offices and in the cloud.

Snapshot-based Backup and Recovery

Minimize data loss and system downtime with image-based snapshots taken as often as every five minutes. With ZeroIMPACT recovery, you can restore anything to anywhere and do it in approximately 15 minutes.

- ✓ Achieve the best recovery time (RTO) and recovery point (RPO) objectives.
- ✓ Provide users with the data they request instantly, during restores, as if the outage never happened.
- ✓ Ensure system, application and data protection and availability everywhere: physical, virtual, and cloud.
- ✓ Replicate and restore data easily offsite and in the cloud for disaster recovery.
- ✓ Reduce storage costs with built-in data deduplication.

Enterprise Backup and Recovery

Protect all your systems, applications and data in large complex IT environments with a single, easy-to-use solution. Whether installed on physical servers, or thousands of virtual machines in the data center, remote offices or in the cloud, you get cost-effective, enterprise-class backup and recovery to meet your RTO and RPO goals.

- ✓ Simplify backup and recovery for Windows and Linux systems, on-premises and in the cloud.
- ✓ Get broad application support including Office 365, Exchange, SQL, SharePoint, Oracle, SAP, MySQL, DB2 and more.
- ✓ Ensure flexibility with multiple storage options including NAS, SAN, VTL and tape.
- ✓ Deploy, manage and maintain backup and recovery across the enterprise more easily.

Deduplication and Replication

Accelerate backup performance, reduce storage requirements and costs, and replicate safer and faster to the cloud for archiving, disaster recovery and business continuity. Leverage low-cost AWS and Azure Blob storage without sacrificing performance.

- ✓ Accelerate backups with protocol accelerators to run backups more often and reduce risk of data loss.
- ✓ Slash storage requirements and costs with content-aware variable block data deduplication.
- ✓ Address disaster recovery by replicating backups offsite and to the cloud.
- ✓ Simplify data protection by backing up directly to storage targets including the cloud.

Uncovering the Secrets to Success with Office 365

Just about every organization at scale has some sort of Office 365 and/or SharePoint presence. Utilizing these platforms efficiently and effectively can be complex, and many potential pitfalls can lead to failure.

So, how can you maximize productivity and succeed?

AIIM, a non-profit association dedicated to nurturing, growing and supporting the information management community, recently conducted a survey of IT professionals whose organizations use at least one cloud-based solution.

Download this informative white paper and explore the advantages, challenges and trends gathered during their time with cloud-based platforms, and more specifically, Office 365. Discover the secrets to success that should be a part of every organization's information management strategic plan.

Scalable, efficient Unified Endpoint Management (UEM)

Cybercriminals are savvier than ever. They understand that IT complexities create serious vulnerabilities, and these criminals are continually developing new ways to breach your organization's boundaries. That is why a proactive, unified endpoint management (UEM) strategy should be part of your organization's core business strategy.

Exploitation of IT vulnerabilities is escalating.

While total IT vulnerabilities have been decreasing, the number considered critical is on the rise - and so are the number of exploits:

Learn about Managing All Devices with Unified Endpoint Management (UEM)

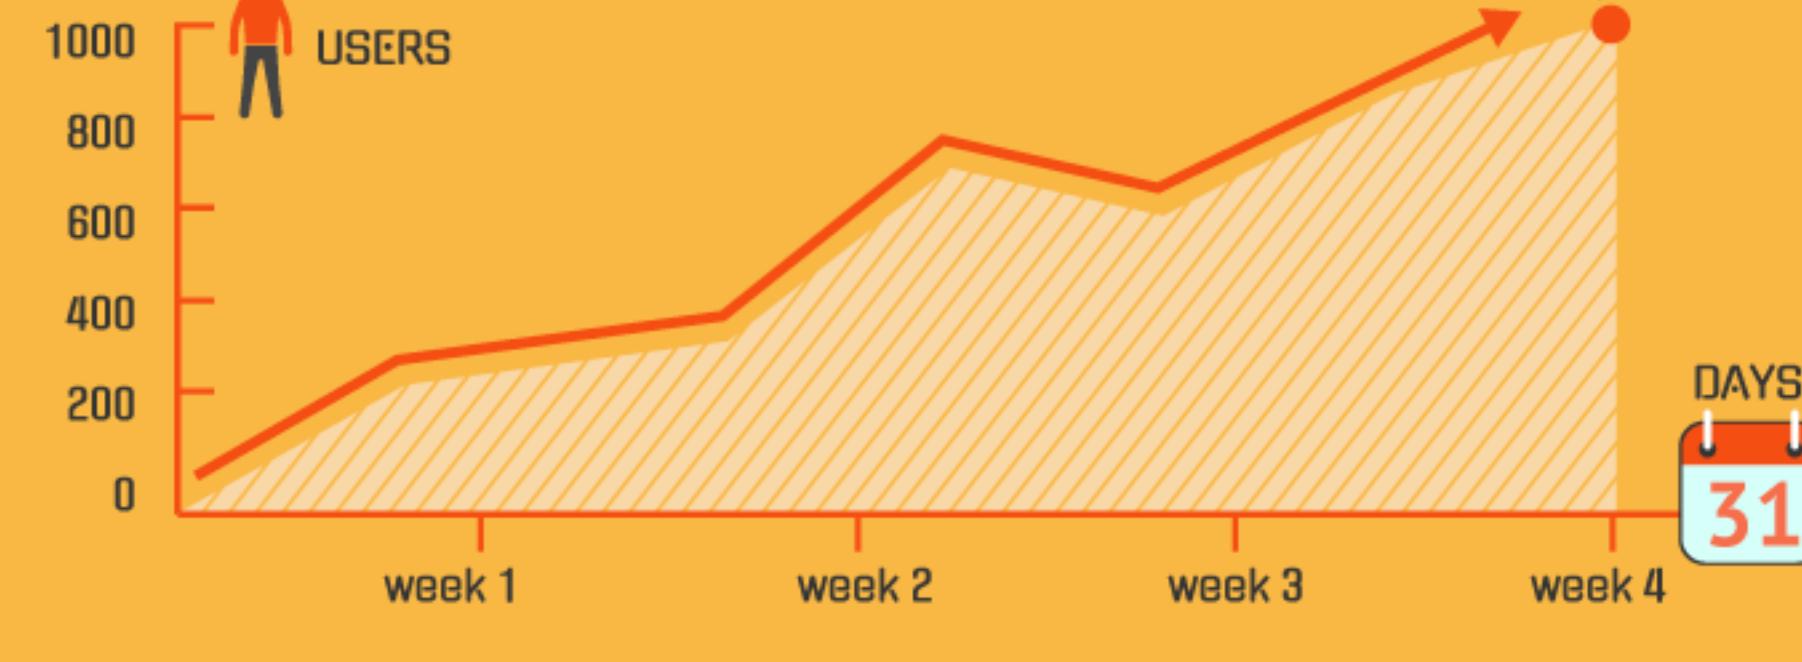

[Read White Paper](#)

Complexity is also on the rise.

Take a look at the number of patches, updates, configuration changes a mid-size enterprise of 1,000 users might see in a month's time:

250,000

The median value of the number of changes to the endpoints over a one-month period¹

See how rapidly you can achieve ROI with our ROI calculator

[Research ROI Calculator](#)

The answer?

A Unified Endpoint Management solution provides you with a holistic view of all connected endpoints and the ability to manage them. UEM will help you:

Streamline

Manage your entire IT infrastructure from a single pane of glass using agent or agentless support.

Scale

Seamlessly scale to address BYOD and the proliferation of mobile devices.

Manage Costs

Avoid overbuying licenses via a precise, up-to-the-minute device catalog.

Secure

Minimize security risks with comprehensive inventory and patching.
